Emblem

WHY SUBLINGUAL?

When cannabis is ingested orally, it takes from 30 minutes to 2 hours before effects are experienced, as it goes through the digestive tract. When cannabis is absorbed sublingually – under the tongue – it bypasses the digestive tract, allowing it to act more quickly.

Kin Slips deliver active ingredients into your bloodstream through the membrane under your tongue. Some patients may experience effects in as little as 10-15 minutes*. Our sublingual strips are designed to provide a consistent experience and effects comparable to inhaled cannabis products.

FAST-ACTING | Some patients may experience effects in as little as **10-15 minutes***. Kin Slips dissolve **under your tongue** in about 1 minute and remain active for an average of 2 to 6 hours. However, individuals may experience effects for up to 8-12 hours.

PRECISE | Kin Slips provide consistent and reliable effects. They are made with naturally-derived cannabis oil and a specifically-curated selection of botanical terpenes, added to deliver a full-spectrum effect.

DISCREET | Kin Slips are paper-thin strips that fit easily in your pocket.

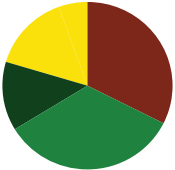

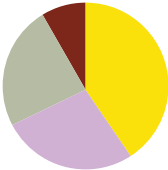

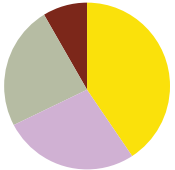

PLANT-BASED | Kin Slips are made with natural ingredients and are vegan.

KIN SLIPS SUBLINGUAL STRIPS

Each Kin Slips blend is formulated for a specific experience. Working with feedback from our community**, we have created three different profiles.

Kin Slips are formulated with peppermint oil to deliver a fresh minty sensation. Place under the tongue for the most effective absorption.
